Contributions

Many contributors offered comments, corrections, and additions to the early-release draft on GitHub.

Contributions on GitHub were facilitated by two editors who volunteered to project manage, review, edit, merge, and approve pull requests and issues:

- Francisco Javier Rojas Garcia (fjrojasgarcia)

- Will Binns (wbnns)

Major contributions were provided on the topics of DApps, ENS, the EVM, fork history, gas, oracles, smart contract security, and Vyper. Additional contributions, which were not included in this first edition due to time and space constraints, can be found in the *contrib* folder of the GitHub repository. Thousands of smaller contributions throughout the book have improved its quality, legibility, and accuracy. Sincere thanks to all those who contributed!

Following is an alphabetically sorted list of all the GitHub contributors, including their GitHub IDs in parentheses:
